

UV LIGHT DEGRADATION OF UNPROTECTED GRAPHICS.

## UV RESISTANT CLEAR COATINGS

### Introduction

ONE SHOT LLC is the leading supplier of high quality lettering enamels, bulletin colors and specialty graphics arts coatings. 1 SHOT'S® reputation for providing the finest paint products for artists has endured and grown over more than 50 years. As part of Spraylat Corporation, 1 SHOT is committed to bringing new products and innovative technology to our many customers.

1 SHOT has recently introduced a new family of high performance, protective clear coatings. Available in both matte and gloss formulations, these unique 1 SHOT products include anti-graffiti clear coats, UV resistant clear coating for painted signage and UV protective clear coats for digitally printed graphics

### UCO UV Resistant Clears for Painted Surfaces

1 SHOT'S new UCO UV RESISTANT CLEAR COATS are high performance, 2 component acrylic urethane coatings that offer good weathering and durability in service. These UV resistant clears have been engineered to seal and protect fine lettering, graphics, painted signs and air brush masterpieces from deterioration due to UV light. This includes all surfaces that have been painted with **Spraylat's Lacryl** sign paints. It also includes surfaces decorated with **1 SHOT GRAPHIC ARTS PAINTS**. UCO UV CLEAR COATS are offered in either a matte or a gloss finish.

UCO URETHANE CLEAR OVERCOAT is a tough, two component acrylic urethane that exhibits excellent weathering capabilities as well as superior UV protection. These protective coatings also enhanced signage durability.

1 SHOT'S UCO UV RESISTANT CLEAR is an acrylic urethane supplied as a 2 component (Part A & B) product in either a matte or a gloss formulation. The coating can be applied by brush, roller or spray. Pot life is 1-2 hours after

mixing depending on the ambient conditions where it is being applied. The coating will be dry-to-the-touch within 30-60 minutes, depending on film thickness and ambient conditions.

### Speed Dry, UV Resistant Clears for Vinyl & Digitally Printed Graphics

1 SHOT'S new 1 component, solvent-based acrylic clear coating is designed for direct application over vinyl signage or digitally printed graphics. This includes use as a protective clear coat for sealing most inkjet prints as well as dye and pigment based inks used on large format printers. The coating is also non-yellowing and waterproof. Vinyl letters can also be edge-sealed to protect the adhesive edge.

This coating provides a significant improvement in the weatherability of unprotected, painted signage or printed graphics as a result of their exposure to UV light. It is suitable for either interior or exterior use on PVC pressure sensitive vinyl, wood, Masonite, MDO plywood, drywall, metal and plastic. It is also recommended as a clear coat over gold leaf. •
